Meet 2D Arrays

```
dataType[][] name = new dataType[numOfArrays][capacityOfEachArray];
int[][] a = new int[3][5];

name[row][column] = value;

int[][] a = {{1,2} {3,4} {5,6}};

Loops and 2D arrays
int[][] a = new int[3][3];
int count = 0;
for (int row = 0; row < a.length; row++) {
   for (int col = 0; col < a[row].length; col++) {
      a[row][col] = count;
      count++;
   }
}

System.out.println(Arrays.ToString(a));
```
